Working Theory: QA checklist

Source: docs/EXPERIENCE_ARCHITECTURE.md, QA states. Mark each box when it passes; write what failed in the notes.

Tester: _____ Date: _____ Browser / device: _____

Setup

In Terminal: `cd /Users/nicoleminoza/code/working-theory` then `npm run dev`. Open `http://localhost:5173` in a real, visible browser window (a hidden tab will not earn theories).

To reset between runs, paste in the DevTools console:

```
localStorage.clear(); sessionStorage.clear(); location.hash = '#/'; location.reload();
```

Production build instead: `npm run build && npm run preview`.

1. Fresh visitor

- [ ] Home shows the hero, three problem rows, Nicole context, and footer.
- [ ] Problem 02 metadata reads `Adobe · 2019–2022 →` .
- [ ] No "Working theory so far" section, counts, checkmarks, or progress.
- [ ] Footer reads "Working Theory / A project by Nicole Miñoza", with a © 2026 line below a hairline.

2. Partial read

- [ ] Open Problem 02, scroll partway, click "← All problems".
- [ ] Back on home, the row is unchanged and no theory has appeared.

3. Single case read

- [ ] Open a case and scroll until the grey ending band is in view.
- [ ] Return home: that row has a quiet italic line under the problem sentence.
- [ ] "Working theory so far" shows one theory, the synthesis line, and the "I'd like to hear about it" link.
- [ ] Reload the page: everything above is still there.

4. Earned order (clear state before each run)

- [ ] Read 01, then 02, then 03: theories appear in that order.
- [ ] Read 03, then 01, then 02: theories appear 03, 01, 02 (not sorted numerically).
- [ ] Each theory number links back to its case.

5. Navigation and scroll

- [ ] Scroll partway down home, open a row: page fades, case opens at the top.
- [ ] Return with the browser Back button: lands at the exact scroll position you left.
- [ ] Return with "← All problems": same exact position, no smooth scrolling.
- [ ] Load `#/01` , `#/02` , `#/03` directly in a new tab: each works.
- [ ] Load `#/04` or `#foo` : shows home. Inside a case, changing the hash to either leaves you on that case.

6. Per-case checks

- [ ] Problem 01 (text engine): static; dark governance band and proof numbers display correctly.
- [ ] Problem 02: chart stays pinned beside the steps and changes at each of the six steps, ending on "Paid on use".
- [ ] Problem 02: below 760px wide the chart stacks above the steps.
- [ ] Problem 03 (Typekit): pinned reframe strikes through the old question and brings in the new one as you scroll.
- [ ] Problem 03: the consequence line draws across the five columns as you scroll.
- [ ] All three: the theory in the ending band is the last content before the footer, with nothing appended.

7. Mobile (375px wide, DevTools device mode)

- [ ] No horizontal scroll or clipped text on home, 01, 02, 03.
- [ ] Home row metadata wraps under the problem sentence.
- [ ] Earned-theory section is legible on home.
- [ ] Header does not cover case content.

8. External links

- [ ] Footer "Email" opens a new message to hello@nicoleminoza.com.
- [ ] Footer LinkedIn, GitHub, and nicoleminoza.com open in a new tab at the right place.
- [ ] Make It Land (home context) opens in a new tab at the right place.
- [ ] Résumé → opens in a new tab at the right place.
- [ ] "I'd like to hear about it" (after earning) opens an email to hello@nicoleminoza.com.

Visual comparison (not automated)

- [ ] Ending bands, typography, and spacing match the design-reference files when viewed side by side.
